SUMMARY

Software Engineer and AI Systems Developer with experience in intelligent infrastructure, real-time AI systems, and scalable software engineering. Skilled in Machine Learning, Reinforcement Learning, networking systems, backend development, and LLM-powered applications, with hands-on experience building production-oriented solutions across healthcare AI, emergency intelligence simulation, and automation frameworks. Strong foundation in Python, distributed systems, testing workflows, and system optimization with a focus on building reliable, high-impact technologies.

WORK EXPERIENCE

Data Analytics Intern – Labmentix	Oct 2025 - April 2026
- Conducted error analysis and data integrity checks across datasets to improve reliability of insights. - Built interactive dashboards and performed data validation and quality assurance checks to ensure accuracy and consistency of business data. - Translated analytical findings into clear insights for non-technical audiences and iterated on analyses based on feedback to improve impact.	
Data Science & Machine Learning Intern– Infotact Solutions	Jan 2026 - March 2026
- Designed and implemented Python-based data pipelines with strong focus on performance optimization and consistent output quality. - Performed systematic testing, evaluation & error analysis of machine learning models using structured validation techniques to ensure correctness and robustness. - Collaborated with cross-functional teams to understand requirements and improve system quality and overall workflow efficiency.	
Machine Learning Intern – VR Academy	Mar 2025 – Jun 2025
- Designed and developed end-to-end systems with emphasis on performance, consistency, and system reliability. - Implemented modular pipelines and conducted continuous testing and system behavior evaluation to ensure robustness across deployments. - Collaborated with mentors to refine solutions through iterative improvements and systematic troubleshooting.	
Software Development Engineer (SDE) Intern – Bluestock™ Fintech	Oct 2025 – Nov 2025
- Worked on backend systems and REST APIs, ensuring functional correctness, reliability, and stable implementation. - Performed module-level testing and issue resolution, improving system stability and performance. - Gained hands-on experience in software development lifecycle (SDLC), testing practices and real-world debugging workflows.	

PROJECTS

OpenEnv — Multi-Agent Emergency Intelligence Simulator (Reinforcement Learning MARL PPO Tactical Simulation)	Link to Project
- Developed a real-time multi-agent emergency coordination simulator for adversarial urban crisis environments using Reinforcement Learning and PPO-based adaptive decision systems. - Engineered dynamic threat prioritization and deceptive signal filtering mechanisms to simulate cascading emergency scenarios and misinformation-driven disruptions. - Built a scalable tactical visualization pipeline with real-time simulation rendering, adaptive routing logic, and human-in-loop coordination workflows.	
Vineetra — Multilingual Clinical Intelligence Infrastructure (Healthcare AI NLP Real-Time Systems LLM Engineering)	Link to Project
- Built a real-time multilingual clinical documentation system capable of generating structured SOAP notes from doctor–patient conversations in regional Indian languages. - Designed AI pipelines for streaming transcription, medical NLP processing, risk flagging, and structured clinical summarization using LLM-based inference workflows. - Optimized for low-resource healthcare environments with lightweight deployment architecture, offline-capable workflows, and rapid inference generation.	
Parkinson's Disease Early Detection (Machine Learning Healthcare AI Research)	Link to Project
- Developed machine learning models for early Parkinson's disease detection using voice signal features, with systematic preprocessing and feature analysis. - Compared and optimized classification algorithms (SVM, Random Forest) using clinically relevant metrics including ROC-AUC, sensitivity, and specificity. - Published a peer-reviewed research paper on ML-based early detection of Parkinson's disease, demonstrating end-to-end research and validation capability Machine Learning-Based Early Detection of Parkinson's Disease Using Voice Features.	

EDUCATION

Bachelor of Engineering at RV College of Engineering.	(GPA: 8.67/10.00)
---	-------------------

SKILLS

Computer Networking:	OSI Model, TCP/IP Architecture, Routing & Forwarding Concepts, DNS, HTTP, DHCP, Network Troubleshooting, Basic Network Security Principles
Testing & Software Engineering:	Test Case Design & Execution, Test Automation, Debugging & Issue Analysis, Defect Tracking & Documentation, Software Development Lifecycle (SDLC), Unit Testing, Integration Testing, System Testing, Version Control (Git/GitHub)
Programming & Automation:	Python Automation, Data Processing, Scripting, Backend Logic
Web & APIs:	RESTful API Development, API Testing, API Integration, HTML, CSS
Systems & Platforms:	Linux Environment, Docker (Containerization), Streamlit
Databases & Cloud:	MySQL, SQLite, AWS, GCP
Languages:	Python, C, JavaScript, SQL
Computer Science:	Data Structures & Algorithms, OOPs, Complexity Analysis, Problem Solving
Data Analysis & Tools:	Pandas, NumPy, Matplotlib, Seaborn, Power BI, Data Visualization, Data Validation & Processing
Soft Skills:	Analytical Thinking, Problem-Solving, Communication, Adaptability, Leadership, Time Management.

ACHIEVEMENTS

- GSSoC'26 Open Source Contributor & Project Contributor** — Selected contributor for GirlScript Summer of Code 2026, contributing to impactful open-source projects focused on scalable software systems and real-world problem solving.
- Meta Hackathon — Grand Finale Finalist** — Selected among top-performing teams for the Grand Finale stage, demonstrating advanced problem-solving, rapid prototyping, and scalable AI/system design under competitive development constraints.IdeaTattva Ideathon
- (NIKSHATRA, BIT Bangalore) – Ranked 1st in Pitching Round (Top 10 of 118 teams)**
- IdeaTattva Ideathon (NIKSHATRA, BIT Bangalore) — Ranked 1st in Pitching Round (Top 10 of 118 Teams)** — Project: *DORCS — Distributed Offline Rescue Communication System*.
- Xcelerate Hackathon (BIT Bangalore) — Top 20 Teams, Qualified for Round 2** — Project: *Rural Healthcare Emergency Guidance App*.
- Joint Director — Literary Services, Rotaract Club of RVCE (Jul 2025 – Present)** — Led teams, coordinated events, and managed operational timelines, strengthening leadership, collaboration, and organizational management skills.
